

Docket No. AUS920010214US1

CLAIMS:

What is claimed is:

1. A method for processing a check in an automatic teller machine, the method comprising:
 - 5 receiving a check from a user at the automatic teller machine;
scanning the check to generate an image;
performing a transaction involving the check; and
transmitting the image to a mobile device associated
- 10 with the user, wherein the image is in a format for use with a financial program.
2. The method of claim 1 further comprising:
importing the image into the financial program.
3. The method of claim 2, wherein the financial program
- 15 is located on the mobile device.
4. The method of claim 2, wherein the financial program is located on another data processing system other than the mobile device.
5. The method of claim 1 further comprising:
- 20 sending an alert for the transaction.
6. The method of claim 5, wherein the alert includes an identification of the transaction.

Docket No. AUS920010214US1

7. The method of claim 1 further comprising:
capturing an image of the user at the automatic
teller machine.
8. The method of claim 7 further comprising:
5 sending the image of the user with the image of the
check to the mobile device.
9. A method for processing a check at an automatic
teller machine, the method comprising:
issuing a check at the automatic teller machine in
10 response to verifying a user request; and
transmitting an image of the check to the user.
10. The method of claim 9, wherein the transmitting step
comprises:
transmitting the image to a mobile device associated
15 with the user.
11. The method of claim 9, wherein the transmitting step
comprises:
sending the image in association with an e-mail
message to the user.
- 20 12. The method of claim 9, wherein the image is in a
format for use with a financial program.
13. A method for monitoring use of a financial account,
the method comprising:
monitoring for transactions involving the financial
25 account at a plurality of automatic teller machines;

Docket No. AUS920010214US1

responsive to identifying a transaction by a user at an automatic teller machine within the plurality of automatic teller machines, capturing an image of the user; and

- 5 associating the image of the user with the transaction to form an alert for use in identifying patterns of use for the financial account.

14. The method of claim 13 further comprising:
sending the alert to a party.

- 10 15. The method of claim 13 further comprising:
sending the alert to each user of the financial account.

16. A data processing system comprising:
a bus system;

- 15 a communications unit connected to the bus system;
a memory connected to the bus system, wherein the memory includes a set of instructions; and
a processing unit connected to the bus system,
wherein the processing unit executes the set of
20 instructions to receive a check from a user at the automatic teller machine; scan the check to generate an image; perform a transaction involving the check; and transmit the image of a mobile device associated with the user, wherein the image is in a format for use with a
25 financial program.

17. A data processing system comprising:
a bus system;
a communications unit connected to the bus system;

Docket No. AUS920010214US1

a memory connected to the bus system, wherein the memory includes as set of instructions; and

a processing unit connected to the bus system, wherein the processing unit executes the set of
 5 instructions to issue a check at the automatic teller machine in response to verifying a user request; and transmit an image of the check to the user.

18. A data processing system comprising:

a bus system;
 10 a communications unit connected to the bus system;
 a memory connected to the bus system, wherein the memory includes a set of instructions; and
 a processing unit connected to the bus system, wherein the processing unit executes the set of
 15 instructions to monitor for transactions involving the financial account at a plurality of automatic teller machines; capture an image of the user in response to identifying a transaction by a user at an automatic teller machine within the plurality of automatic teller
 20 machines; and associate the image of the user with the transaction to form an alert for use in identifying patterns of use for the financial account.

19. A data processing system for processing a check in an automatic teller machine, the data processing system
 25 comprising:

receiving means for receiving a check from a user at the automatic teller machine;

scanning means for scanning the check to generate an image;

Docket No. AUS920010214US1

performing means for performing a transaction involving the check; and

transmitting means for transmitting the image to a mobile device associated with the user, wherein the image
5 is in a format for use with a financial program.

20. The data processing system of claim 19 further comprising:

importing means for importing the image into the financial program.

10 21. The data processing system of claim 20, wherein the financial program is located on the mobile device.

22. The data processing system of claim 20, wherein the financial program is located on another data processing system other than the mobile device.

15 23. The data processing system of claim 19 further comprising:

sending means for sending an alert for the transaction.

20 24. The data processing system of claim 23, wherein the alert includes an identification of the transaction.

25. The data processing system of claim 19 further comprising:

capturing means for capturing an image of the user at the automatic teller machine.

Docket No. AUS920010214US1

26. The data processing system of claim 25 further comprising:

sending means for sending the image of the user with the image of the check to the mobile device.

5 27. A data processing system for processing a check at an automatic teller machine, the data processing system comprising:

issuing means for issuing a check at the automatic teller machine in response to verifying a user request;

10 and

transmitting means for transmitting an image of the check to the user.

28. The data processing system of claim 27, wherein the transmitting means comprises:

15 means for transmitting the image to a mobile device associated with the user.

29. The data processing system of claim 27, wherein the transmitting means comprises:

20 means for sending the image in association with an e-mail message to the user.

30. The data processing system of claim 27, wherein the image is in a format for use with a financial program.

31. A data processing system for monitoring use of a financial account, the data processing system comprising:

25 monitoring means for monitoring transactions involving the financial account at a plurality of automatic teller machines;

Docket No. AUS920010214US1

capturing means, responsive to identifying a transaction by a user at an automatic teller machine within the plurality of automatic teller machines, for capturing an image of the user; and

- 5 associating means for associating the image of the user with the transaction to form an alert for use in identifying patterns of use for the financial account.

32. The data processing system of claim 31 further comprising:

- 10 sending means for sending the alert to a party.

33. The data processing system of claim 31 further comprising:

sending means for sending the alert to each user of the financial account.

- 15 34. A computer program product in a computer readable medium for processing a check in an automatic teller machine, the computer program product comprising:

first instructions for receiving a check from a user at the automatic teller machine;

- 20 second instructions for scanning the check to generate an image;

third instructions for performing a transaction involving the check; and

- 25 fourth instructions for transmitting the image to a mobile device associated with the user, wherein the image is in a format for use with a financial program.

35. The computer program product of claim 34 further comprising:

Docket No. AUS920010214US1

fifth instructions for importing the image into the financial program.

36. The computer program product of claim 35, wherein the financial program is located on the mobile device.

5 37. The computer program product of claim 35, wherein the financial program is located on another data processing system other than the mobile device.

38. The computer program product of claim 34 further comprising:

10 fifth instructions for sending an alert for the transaction.

39. The computer program product of claim 38, wherein the alert includes an identification of the transaction.

40. The computer program product of claim 34 further
15 comprising:

fifth instructions for capturing an image of the user at the automatic teller machine.

41. The method of claim 40 further comprising:
sixth instructions for sending the image of the user
20 with the image of the check to the mobile device.

42. A computer program product in a computer readable medium for processing a check at an automatic teller machine, the computer program product comprising:

Docket No. AUS920010214US1

first instructions for issuing a check at the automatic teller machine in response to verifying a user request; and

5 second instructions for transmitting an image of the check to the user.

43. The computer program product of claim 42, wherein the second instructions for transmitting comprises:

sub-instructions for transmitting the image to a mobile device associated with the user.

10 44. The computer program product of claim 42, wherein the second instructions for transmitting comprises:

sub-instructions for sending the image in association with an e-mail message to the user.

15 45. The computer program product of claim 42, wherein the image is in a format for use with a financial program.

46. A computer program product in a computer readable medium for monitoring use of a financial account, the computer program product comprising:

20 first instructions for monitoring transactions involving the financial account at a plurality of automatic teller machines;

second instructions, responsive to identifying a transaction by a user at an automatic teller machine
25 within the plurality of automatic teller machines, for capturing an image of the user; and

[illegible]

5

fourth instructions for sending the alert to a party.

10

fourth instructions for sending the alert to each user of the financial account.
